

# PHOTO START

## MISSION

We use photography to teach students the skills to thrive in any environment.

## VISION

Through photography, we will nurture the focus, perspective, and vision of the leaders of tomorrow, who will impact their communities for generations to come.

---

Photo Start uses photography and video to connect children and young adults with new opportunities for success. We aim to close the digital divide and catalyze students' economic advancement, creative talents and personal well-being.

## OUR IMPACT

We have provided  
**20,000+**  
hours of hands-on  
training to

**600+**

children and young adults  
in under-resourced  
communities

Science. Technology. Engineering. Arts. Maths.

Our photography, video, and digital production curriculum provides a low-cost, high-value experience that reinforces many STEAM disciplines.

## LOOKING AHEAD

In March, we expanded our programming to provide lessons online and have taught 60 students this year. We are busy growing our family of partners to serve more young people around the world.

## EACH ONE TEACH ONE

To ensure our sustainability and scale, we encourage all of our graduating students to become certified trainers and spearhead a cycle of instruction and mentorship.

**This year, 49 students  
have graduated to  
trainer status.**
